Parts List Tomato Cage

(5) POLES

(4) RINGS

Parts List Tall Tomato Cage

(5) TOP POLES

(5) BOTTOM POLES

(6) RINGS

Assembly

1. For the TALL TOMATO CAGES only:

Slide the TOP POLES into the BOTTOM POLES, making sure they are fully seated by holding the TOP POLE right above the connection point and gently hitting the connected POLES against the ground a couple times.

2. Start by attaching the bottom RING. Place a POLE on a flat, protected surface. Position the slot in a RING over the POLE and use your body weight to press down on it until the POLE snaps into place (Fig. 1). Repeat to attach the remaining POLES, making sure they are all pointed in the same direction and that the RINGS are as level as possible.

3. Attach the remaining RINGS working your way up the support. Once they're all attached, slide the RINGS up and down until they are evenly spaced on each POLE.

4. Press the pointed ends of the POLES into the soil. **NOTE:** The Tall Tomato Cage should have at least 6" in the soil.

The Cages are weatherproof and may be left outdoors all year.
