SUPPLY COMPANY

LED Retrofit Bulbs

Our LED bulbs produce an abundance of brilliant, full-spectrum light, while using only half the electricity of fluorescent bulbs and providing up to 50,000 hours of use. **NOTE:** The LED Retrofit Bulbs are to be used with our fluorescent SunLite® Gardens or Stack-n-Grow Light Systems. They are not replacement bulbs for our LED Gardens.

Installation Instructions

Important: Before beginning, inspect your light fixture for damages. Do not attempt to install the LED Retrofit Bulbs if any damage is found.

Step 1. Disconnect your light fixture from its power source.

Step 2. Carefully remove the fluorescent bulbs one at a time. Twist them 90 degrees and slide the pins through the slots in the Ballasts (Figure 1). **NOTE:** Do not apply excessive force to the bulbs or the light fixture.

Step 3. Remove the plastic covering each set of pins on the LED Bulbs. Install them by sliding the pins on the Bulbs into the Ballast sockets, then gently twisting them 90 degrees until they “lock” into place (Figure 1). **Tip:** If the LED Bulbs look misaligned, press on the white plastic cover to pop it back into place (Figure 2).

Step 4. Once all of the LED Bulb are in place, you can reconnect your light fixture to its power source.

Please dispose of your fluorescent bulbs safely at your recycling center.
