

# GARDENER'S SUPPLY COMPANY

## Victory Self-Watering Planter Trellis Extension

This support adds 22" of height to your Victory Self-Watering Planter, allowing you to grow plants up to 5' tall.

### Parts List

- (2) Poles
- (2) Pole Connectors
- (6) Clips
- (6) Wire Supports

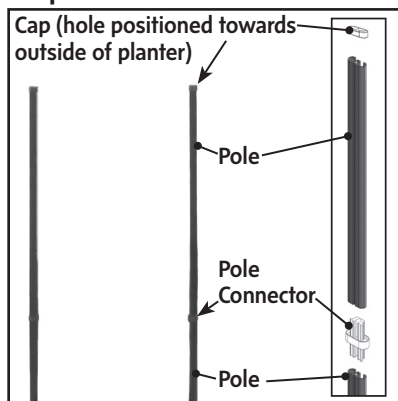

### Assembly

**NOTE:** The Caps mentioned in the instructions come with the Victory Self-Watering Planter (sold separately).

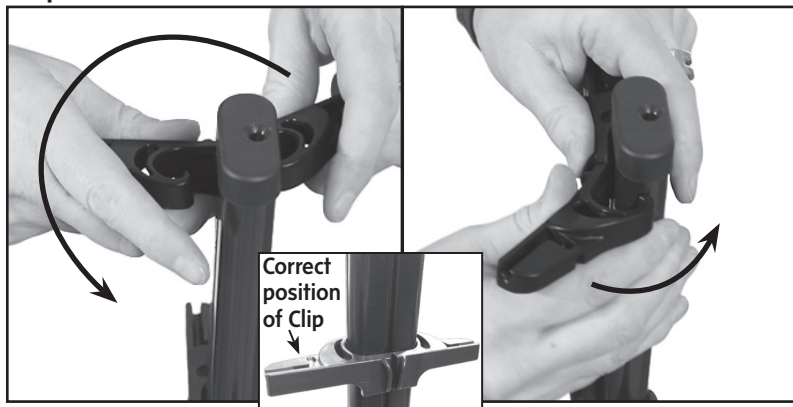

**Step 1.** Remove the Caps from the top Poles on your planter.

**Step 2.** Slide the Pole Connectors into the tops of the Poles from Step 1, then slide the new Poles over the Connectors. Place the Caps on top.

### Step 2

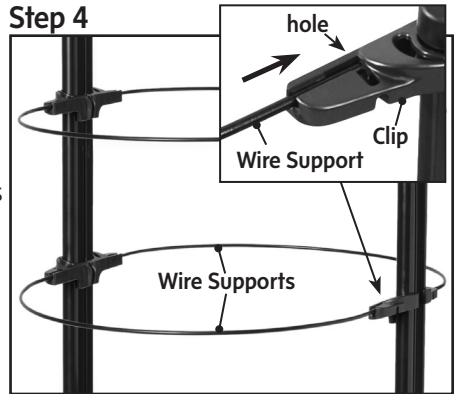

### Step 3

**Step 3.** With a Clip held upright, slide one side into the back of a Pole. Twist it around the front of the Pole and use two hands to snap the other side of the Clip into place. Repeat to attach the remaining Clips. There should be 3 Clips on each side lined up so they are parallel with each other.

**Step 4.** Slide the ends of the Wire Supports into the slots on the Clips and through the holes at the ends of the channels. Push them in as far as they can go.

**Important:** When growing taller plants with the Extension, it is important to use the Tie Down Systems that come with the Victory Self-Watering Planter. They provide stability and help prevent your Planter from tipping over when your plants grow big and heavy.
