

GARDENERS SUPPLY COMPANY

Shade Kit, 4' x 8'

Use in your Gardener's 4x8 raised bed or anywhere your garden needs instant relief from the sun. Provides 50% shade so plants get enough light to flourish without getting burned or bolting too early.

Installation

Each Stake comes in 3 sections that slide together. The bottom section has a pointed end and the top section has a disk that the finial attaches to.

Place an assembled Stake in each corner of your 4' x 8' area, pressing the pointed ends into the ground. **NOTE:** We recommend a depth of around 8" for good stability. If necessary, use a rubber mallet to pound them into place.

Remove the ball finials from the top sections of the Stakes. Place the grommets in each corner of the Shade Netting over the disks and screw the finials back into place (Figure 1). Use the grommets in the middle of the netting to figure out where to place the remaining Stakes.

The powder-coated steel stakes are weather-resistant. However if the finish is nicked or scratched, use an exterior-grade metal paint to prevent rust.

Tip: If you want the shade netting at a lower height, remove the center section of the Stakes.
