

Butterfly Feeder

Attract butterflies to your garden with a garden-art feeding station made just for them. These beautiful and important pollinators love bright colors. The colorful feeder pad gives them secure footing as they sip nectar.

Parts Included

Stake, iron, 2 sections
Flower Top, iron
Bowl, glass
Feeder Pad

Assembly

- Step 1.** Select a location that receives full sun from midmorning to mid-afternoon. Butterflies enjoy basking in the warm sun.
- Step 2.** Thread together the two-part Stake. Thread the assembled Stake onto the Flower Top. **Tip:** Place the Flower Top upside down and thread the assembled Stake into the threaded hole. Turn right side up. Push the footed stake into firm soil. Loose soil may allow the feeder to topple.
- Step 3.** Place the Bowl into the center of the Flower Top, and the Feeder Pad into the Bowl. Adjust the Stake position as needed to level the Bowl.
- Step 4.** Make a batch of Butterfly Nectar (sold separately), following the instructions that come with the nectar. **Caution:** Do not make the nectar solution stronger than is stated in the instructions. A higher concentration solution can harm the butterflies.
- Step 5.** Pour 5 ounces of the nectar solution into the Bowl and over the Feeder Pad so that nectar adheres to the Pad. The nectar should fill the Bowl, but not cover the Pad. Butterflies will cling to the Pad, but they will not land on the liquid. Store the unused portion of the solution in the refrigerator for up to two weeks.
- Step 6.** Clean and refill your feeder every 5 to 6 days. Remove the Feeder Pad and rinse with clean water to dislodge any dead insects or other debris. **Important:** Bring indoors during freezing temperatures. Liquid in the Bowl could freeze and crack the glass.
