

Jumbo Self-Watering Hanging Basket

Our Jumbo Self-Watering Hanging Basket is large enough for a compact tomato plant or an arrangement of colorful flowers. The 2-quart reservoir in the bottom of the basket holds water where plant roots can reach it. Plant roots will grow down into the reservoir as they mature.

When used outdoors, the overflow holes in the center bottom of the pot prevent the potting mix from becoming too wet in rainy conditions. If using the basket indoors, use a saucer underneath to catch overflow. Note: the basket does not contain a fill tube or water level indicator.

Assembly

The basket holds 12 quarts of planting mix. We recommend our Self-Watering Container Mix. Add 1/4 cup of our organic 5-5-5 All-Purpose granular fertilizer or similar, following package instructions. Blend thoroughly.

After planting, water the planting mix to settle it and ensure good contact with the plant roots. When the potting mix begins to feel dry, top water the basket with up to 2 quarts of water to fill the reservoir.
