

Pear Fruit Fly Trap

Apple Fruit Fly Trap

Our glass pears and apples trap fruit flies that enter through the base and can't find their way out.

Instructions

Step 1. In a measuring cup with a pouring lip, add one packet of lure to $\frac{1}{4}$ -cup of water. The packet will dissolve — no need to open it.

Step 2. Remove the stem from the glass trap. Hold the trap in one hand and tip it slightly as you pour the liquid bait into the top and down the inside. Take care not to pour it through the hole in the bottom.

Step 3. Replace the stem and set the trap in place. The bait is effective for two weeks.

Handwash the glass trap in soapy water. This item is not dishwasher safe. Keep out of direct sunlight to prevent the chance of a fire.
