Big Green Compost Bucket

With our Big Green Compost bucket you can make fewer trips to the compost bin—great in the winter when it's cold outside or in the summer when you're processing lots of fruit and veggies. The bucket holds five gallons of food scraps, so it's handy for collecting waste for curbside pickup or dropping off at a municipal composting facility. The air-tight gamma seal in the lid locks in odors. It makes doing the right thing easy!

Assembly

Assembly requires a rubber mallet or a hammer with a piece of scrap lumber for cushioning.

Step 1. Twist off the lid from the black ring. Set it aside.

Step 2. Place the black ring over the top edge of the bucket. Use a rubber mallet or a cushioned hammer to tap the ring down onto the bucket until the ring is fully seated and level. **Tip:** Tap evenly around the ring to seat it.

Step 3. Replace the lid by twisting it back into the ring.
