Sentry Arch

The Sentry Arch has a simple, clean design that is perfect for showing off your climbing plants.

Parts List

- (2) Upper Side Panels
- (2) Lower Side Panels with capped feet
- (4) Arch Supports
- (4) Metal Inserts
- (2) Straight Supports
- (4) Arch Braces
- (1) Pound-In Stake

Assembly

Step 1. Slide the ends of the Upper Side Panels into the tops of the Lower Side Panels (Figure 1).

Step 2. Slide a Metal Insert into both ends of a Straight Support. Slide Arch Supports onto the other ends of the Inserts (Figure 1). Repeat with the remaining Supports and Inserts.

Step 3. Place the ends of the Arch Supports into the tops of the Upper Side Panels (Figure 1).

Step 4. Snap two Arch Braces over the seams where the Arch Supports and the Straight Supports meet (Figure 2). Place the other two Braces along the curve of the Arch Supports.

Step 5. Select a location to place your Sentry Arch that is protected from high winds.
NOTE: The arch must be installed in firm soil. If you have loose or sandy soil, we recommend securing the arch in concrete.

Step 6. Place the Arch in the chosen spot and mark the ground with the capped feet on Lower Side Panels. Move the Arch and use the Pound-In Stake and a rubber mallet to make a hole in each marked spot. **NOTE:** We recommend a depth of around 8" for good stability. Push the legs of the Sentry Arch into the holes. Your assembly is complete!
